

Compare strategies and check reasonableness

2026-09-25 | Grade 5 | 45 minutes

Learning focus

Use equivalent fractions to add unlike denominators. Explain calculations and context while recording actual help.

00-05 min

Compare equivalent totals

Recognize that $\frac{3}{6}$ and $\frac{1}{2}$ name the same amount and explain why.

05-13 min

Compare two valid methods

Teacher models unlike-denominator addition with two common denominators and checks the total against the addends and one whole.

13-25 min

Ordinary paired strategy practice

All pairs solve two new fraction-addition calculations, compare methods, and justify whether each answer is reasonable.

25-40 min

Apply and explain

Students solve fresh fraction-addition word problems and explain one method to a partner while the teacher circulates.

40-45 min

Independent explanation

Students complete a fresh sum and explain how they know the answer is reasonable.

Review current evidence before changing this plan. The assessment stays fixed on October 2.
