

Apply fraction addition to word problems

September 23, 2026 | Grade 5 | 45 minutes

Learning focus

Use equivalent fractions to add unlike denominators. Explain the total in a word problem using working and units.

00-05 min

Recall equivalent fractions

Use an equal-whole model to connect $\frac{1}{2}$ and $\frac{2}{4}$, then explain why both have the same value.

05-13 min

Model a word problem

Teacher models a new fraction-addition context using common-sized parts, adds, and checks the total against one whole.

13-25 min

General paired practice

All students complete the same two unlike-denominator fraction word problems in pairs.

25-40 min

Apply to word problems

Students solve and explain fraction-addition contexts; the teacher circulates and records observations.

40-45 min

Explain an addition method

Students explain why equivalent fractions are needed and complete a short exit check.

Planning note: Review September 22 work before finalizing practice. The assessment remains fixed on October 2.
