

Equal parts before adding

Name: _____ Date: _____ 12 minutes

Show your thinking with calculations, words, or labeled models. Use the same-sized whole in every fraction model.

1. Use two equal-length fraction strips. Shade $\frac{1}{2}$ on one and $\frac{1}{4}$ on the other. Rename the halves as fourths, then find $\frac{1}{2} + \frac{1}{4}$.

--

--	--	--	--

2. Draw or use equal-length strips to solve $\frac{1}{5} + \frac{1}{10}$. Label the equal-sized parts and write the matching calculation.

--

--	--	--	--	--	--	--	--	--	--

3. A fictional student says $\frac{1}{2} + \frac{1}{4} = \frac{2}{6}$ because they added both tops and bottoms. Explain what needs to change, then write a correct calculation.
